Illumina Connected Analytics v2.3.1 Customer Release Notes

Introduction

Illumina Connected Analytics is a cloud-based software platform intended to be used to manage, analyze, and interpret large volumes of multi-omics data in a secure, scalable, and flexible environment. The versatility of the system allows the platform to be used for a broad range of applications. When using the applications provided on the platform for diagnostic purposes, it is the responsibility of the user to determine regulatory requirements and to validate for intended use, as appropriate.

For information on how to use the system, see the Illumina Connected Analytics Online Help at <https://support.illumina.com/documentation.html>.

Bugs Fixed

- Fix issue where pipeline launch is blocked when a single file is used as the input to multiple pipeline inputs
